Report	A session on the basic introduction about web desiging was delivered to the students of bca sem 1 batch 2 students by the students of the same class who were experts in this field. The program was hosted by Post Graduate Department of Computer Applications. The session was attended by 25 students . The session was really informative and the students highly involved in the session and gave good feedback. Some of the areas covered in the session are: **Web Designing and Web Designer:** Web design is the creation of websites and pages to reflect a company's brand and information and ensure a user-friendly experience. A web designer creates the layout and design of a website. In simple terms, a website designer makes a site look good. They use design programs to create visual elements. **Front-End Development:** Front end development is the area of web development that focuses on the user interface.

	Back-End Development: Back-end development means working on server-side software, which focuses on everything you can't see on a website **Client and Server:** A client usually does not share any of its resources, but it requests content or service from a server. **Domain Name Server (DNS):** A DNS is a computer server that contains a database of many IP addresses and their associated domain names. **Web Hosting:** Web hosting is an online service that allows you to publish your website files onto the internet. So, anyone who has access to the internet has access to your website. In practice, it usually refers to the service you get from a web hosting provider like one.com. **GitHub:** GitHub is a code hosting platform for version control and collaboration. It lets you and others work together on projects from anywhere. The duration of the session was 1 hour and the students were highly active and got good appreciation about the session.
